

Youtube Homepage Clone

Problem Statement

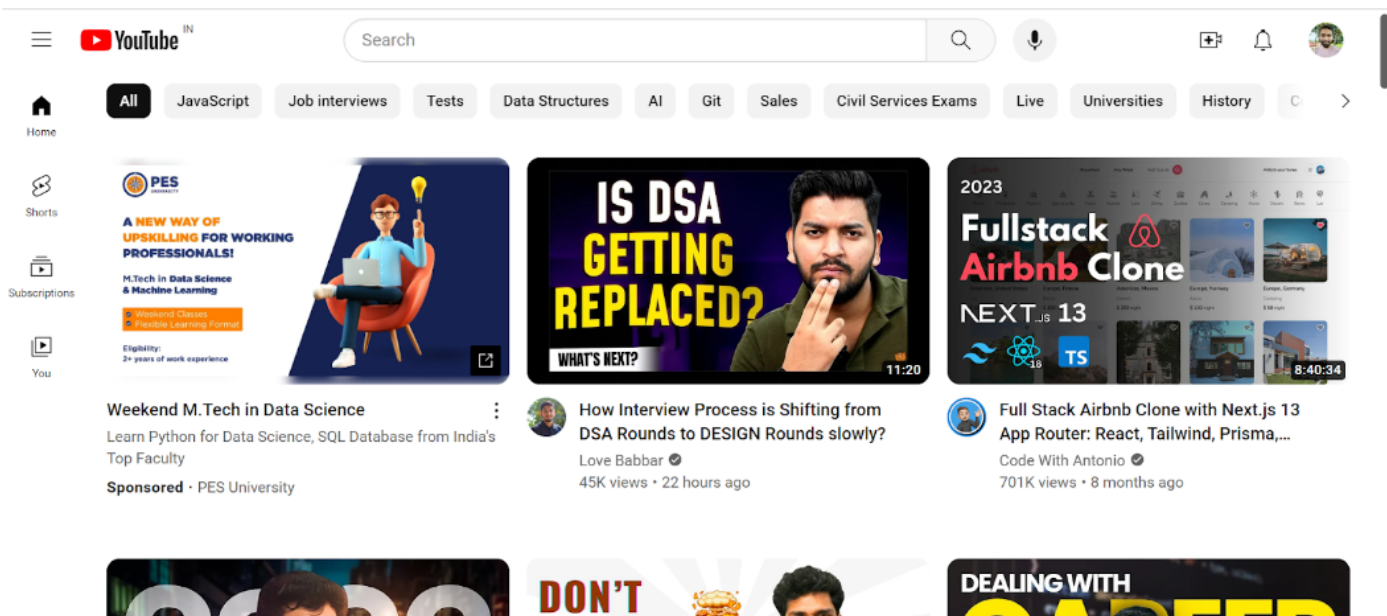

- Your task is to create a clone of the youtube homepage.
- Project is a static clone which means you have to only create the user interface only, no need to make it interactive and dynamic.
- You have to gather all the required assets from the website itself by inspecting.
- You can download the assets or can use the links if possible.
- If possible try to make it responsive for all the screen sizes.
- Its completely a personal choice to make it responsive (not mandatory).
- [Website Link](#)

Tech Stack

- HTML
- Tailwind CSS

Sample Output

In case you are not getting that how UI should look, use this output image as a reference and create the website like this one.

Submission Process

Submission process is similar to that of the assignment submission through the dashboard.

Mandatory Process ([Process PDF Link](#))

Step 1: Create a local folder in your machine.

Step 2: Complete your assignment in that folder.

Step 3: Create a new repository on github for uploading this project over there.

Step 4: Upload your project in that repository by drag and drop or by using git commands (if you are aware of it).

Step 5: Submit the github repository link in the assignment submission of this project.

Step 6: Deploy your project on github pages, netlify or vercel.

Step 7: Add the deployed link in the about section of your github repository.

Optional

Step 8: Share your projects deployed link on linkedin and tag PWSkills to increase your reach and to share your learning journey with others.

Note: Solution of this project will be provided to you after 1 week of uploading of this project, so it will be good if you are able to create and submit it within 1 week of time but there is no time limit is defined for its submission so take your time and create it.

**** Best of Luck and Happy Learning ****
